Dear Sir/Madam,

Companies are Fined for Using Illegal Software

Many corporates in Sri Lanka use illegal software copies for their day to day work. It is an offense under the Intellectual Property Act No. 36 of 2003. If you are using such pirated software we would like to give you a solution to the current software licensing issue. Ceylon Linux offers Free and Open Source Software (FOSS) as an alternative to the expensive office software suite and other proprietary applications / servers.

Ceylon Linux promotes the use of Linux Operating System & Open Source Software in Sri Lanka, in order to save huge amount of money flowing out of the country. Many private and government sector organizations have already saved significant amounts by using FOSS applications such as OpenOffice, Linux Mail and Collaboration, Windows to Linux Migration, Firewall / Proxy, VOIP PBX Server, WAN Load Balancer etc... with Ceylon Linux.

Ceylon Linux is happy to provide ICT Consultancy, Solutions, Software Systems Development and Training services to your organization. If you are already having servers, Ceylon Linux is capable of maintaining them without any downtime. Being the market leader for the last six years, Ceylon Linux has completed many award winning projects using Linux & FOSS. We cater to many corporates and listed vessels in Sri Lanka.
